

VARIO SNOW PLOUGH BLADE

The Vario snow plough features two hydraulically swivelling wings. Snow can be cleared in the V, Y or diagonal position. This snow plough is therefore the ideal companion for clearing snow from footpaths, cycle paths and roads.

Advantages at a glance

- Non-icing spring flaps
- Blade height: 65 cm outside / 55 cm inside
- Edge deflectors protect the outer spring flaps
- Convenient control of the blade position via Bluetooth using a supplied smart-phone (when using a double-acting connection and the electric switchover valve)

Loader requirements

- 2 double-acting connections (alternatively 1 double-acting connection and 1 electric switchover valve with an electric connection at the front)

Options

- Electric switchover valve 12V/24V for swivelling operation (only 1 double-acting connection and additional 3-pin socket required)
- Marker lights in accordance with the German Road Traffic Act (additional 3-pin socket, include a 7-pin socket for the two marker light options and the electric switchover valve)
- Warning flag holders and warning flags
